

DIGITAL LITERACY PROJECT REPORT

A project on computer literacy

Project Details:

Name: SOUMYA TANDON

Registration Number: 25BSA10030

Branch: Computer Science (Cloud Computing and Automation)

Year: 2025-26

Course Code: CSE0001

Date: 29th March

Introduction

As a Student Digital Ambassador, I have been tasked with assisting fellow students as they learn how to use technology and the Internet properly. The project provided consists of five tasks representing individual Modules completed in the course; they cover Digital Literacy, Professional Image, Email Etiquette, and Cyber Crime Prevention.

I have completed all the task as required and I have provided the write ups for each task in this report. This project helped me realise what is the actual essence of digital literacy by making me understand the importance of digital portfolio, use of different platforms like Canva, GitHub, Hacker Rank etc and how to use them efficiently. The case study helps me realise that how to remain safe from cyber phishing and cyber crimes. To conclude, it was a great learning experience

Task 1 : Create a Digital Literacy Awareness Infographic

Write - Up :

I created my infographic on Digital Literacy using Canva. Canva made preparing this infographic easier because it has so many templates, icons and design elements. This provided me with the basis to place my information in an attractive way. My infographic contains information about Digital Literacy: what it is; a list of digital tools; and internet safety practices. Each section contains a very brief description of the section, with an icon provided to signify it.

The layout of the design shows the importance of being able to use digital skills not only in school, but also for a career, and to be safe online.

The hardest part was finding a balance between providing enough information, yet still keeping the infographic simple. It's a challenge to put all of the relevant points onto one page without making the reader feel overwhelmed by reading so many items. I also enjoyed using the visuals of Canva to represent an idea such as email etiquette and professional presence online in a visually creative way. Overall, this was an opportunity for me to think critically on how to represent complex ideas visually.

Task 2 : Build Your Student Digital Portfolio

Write - Up :

I decided to create my account on GitHub, LinkedIn, and Kaggle because I want a digital presence that supports my academic and career ambitions. GitHub will allow me to share my coding projects, monitor my progress, and collaborate with others on open source projects, which will enhance my technical abilities and allow me to create a professional portfolio.

LinkedIn is my go-to site for all things professional networking. I have updated my education information as well as my certifications. LinkedIn helps me to connect with other users like my peers, alumni, potential internships and provide them with the ability to keep up-to-date on current industry events.

I will be using Kaggle to improve my skills in machine learning by participating in competitions and assisting with projects; therefore, I will be able to apply what I have learned practically. I will continue to maintain my profiles on GitHub, LinkedIn, and Kaggle over the next four years by updating my work regularly and connecting with other members of these sites so that I can showcase my continuous learning, gain valuable insights from professionals, and improve my opportunity to be hired.

Task 3: Explore Coding & Collaboration Platforms

Write - Up :

To achieve this project for my coding practice, I used Hacker Rank's coding challenge platform and signed up to complete the 'Solve Me First' challenge which is a beginner's challenge; i.e. write a piece of code that adds together two integers. It gave me insight into how the coder's world works and the codes they use to solve problems in addition to being the easiest programming challenge, it has also increased my confidence and desire to solve coding problems on a daily basis.

I developed a Google Form; "Digital Literacy Awareness Quiz," with five questions assessing students' basic knowledge of Digital Literacy concepts. Each question is in either multiple-choice format or short-answer format and results are automatically populated in an associated Google Sheet, allowing for easy data access and sorting.

I utilize Google Forms & Sheets to gather and analyse information, conduct surveys and manage data. This means these Software's will assist my education and provide simpler methods to collaborate with others, share information and perform project management.

Task 4 : Draft a Professional Email & Etiquette Guide

Write - Up :

As I conducted my research for this project, I discovered an example of a student submitting a poorly constructed email to ask their professor for an extension on an assignment. The email had no clear subject line, used casual language when addressing the professor and was vague in its explanation. Because the request was unclear due to the way the email was written, the professor misunderstood and denied the student's request for an extension. Eventually, both the professor and student experienced unnecessary stress and confusion as a result of their communication error.

This incident clearly illustrates how ineffective or unprofessional digital communications can cause very serious issues. If the student had written an email that was professional, well-organized, included an appropriate greeting and closure, and provided a clear reason why they were unable to meet their deadline, there would not have been any misunderstanding as to what type of support he or she was looking for from the professor. I have learned from this experience that when communicating digitally, professionalism, clarity, and tone are extremely important

to ensure a request will be viewed seriously; to maintain rapport; and to avoid potential misunderstandings.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

Write - Up :

Part B - During my research on the subject of online safety and cybercrime, I was shocked to learn how much everyday activities, like selecting a random link in an email or sharing UPI payment information are put at risk by every cybercriminal. Even activities you may believe are gentle; such as replying to a generic message could lead to you suffering a huge loss financially or personally. I also became aware of how vulnerable students are because they conduct a great amount of their business online and utilize numerous digital platforms.

I have decided to start a habit of verifying every online transaction, especially those that involve sharing sensitive information such as financial transactions, before confirming the transaction. I intend on confirming the sender's information prior to the transaction and will never click on potentially suspicious links. I will also only utilize official sites and apps that have been provided to me. The goal of

this project was to emphasise the importance of being proactive towards protecting your personal and financial information by developing and maintaining good habits and practices when it comes to internet safety. I believe I can also help my classmates and friends to do the same by encouraging them to take the same precautionary measures in order to protect themselves while using the internet.

Conclusion

Working on this Project as an e Portfolio has been an amazing journey for me. It allowed me to gain new hands-on experience creating professional profiles online, creating visuals, coding, communicating by email, and gaining insight into the threat of cybercrime. Each lesson helped me develop my technical skills, as well as raise my consciousness to the need for being safe, responsible and professional while online.

I learned how to visually represent complex ideas, how to maintain a positive online presence, how to utilize cloud-based tools for collaborative work, and how to protect my personal information from being compromised by cybercriminals. Overall, this project has significantly enhanced my technical skills and boosted my digital confidence, and in turn, prepared me to engage with fellow students in an increasingly intelligent, safe and professional manner while using the Internet.
