

TASK 1 : Brief Description

Using Canva to create my Digital Literacy Awareness infographic was fun. The objective was to present important concepts simply, visually, and clearly so classmates would understand them easily. Aspects of digital literacy, tools students use digital tools, as well as being safe using the internet are the topics in my infographic; therefore, each area has a short description and an image to make the create clear and interesting to read with some limited text so they do not cause confusion.

When designing the infographic, I wanted to keep the layout cleaned to show that digital literacy is very important to get good grades and help find a job in the future, as well as being a responsible internet user. One difficult part of the design process was balancing the amount of content that is included; if too much text will make the information cluttered, if too little will not provide enough information to convey my message.

I enjoyed using visuals, like email etiquette and having a professional presence online, to represent my ideas. This project helped me become more creative about how I can present valuable information concisely and effectively.
