

TASK 3: NOTES

I discovered Hacker Rank, a coding practice site, and Google Forms, for collaboration, together. I signed up for Hacker Rank, did a beginner level coding challenge, and learned basic problem solving and coding logic using an organized method. I can now complete additional questions and progressively enhance my programming ability as I gain confidence through repetition of coding challenge completion.

In using Google Forms, I developed a Digital Literacy Awareness Quiz for my classmates with a mixture of types of both multiple choice and short answer questions. I then examined and analyzed how responses to the quiz were displayed in the corresponding Google Sheet which demonstrated the simplicity of collecting and organizing data.

Both of these platforms have shown me their effectiveness in learning and collaborating. Hacker Rank will assist me with continuing my academic success through furthering my coding skills and Google Forms can be used for surveys, quizzes and group work on projects. Ultimately, both platforms will enhance my ability to learn, work collectively with my peers, and develop useful skills for my future profession.
